
Edgerstoune Optics Quality Control

Specification File QCBBAR.XLS

Average = 0.186%, Maximum = 0.325%

This spectrum MEETS specifications.

This report, printed directly by FilmStar, demonstrates the report generator included in DESIGN and MEASURE. The logo was created in CorelDRAW and stored as a metafile. Bitmaps can also be utilized. The graph was automatically generated by the built-in FSPlot graphing module.

Calculated results including the text "MEETS specifications" are automatically computed from the spectrum. This is accomplished by importing text from the FilmStar Workbook. Boilerplate text (like this) can be stored on disk and inserted into multipage documents. It's easy to add further information such as customer name, work order number, etc.

How complicated is this to use? While the engineer setting up procedures needs to understand report templates and other FilmStar development facilities, quality control technicians need no such understanding. Everything can be reduced to user-friendly dialog box options.
